## Frequencies for chemical free living.

Crystals have long been used in radios, sonar, microphones, speakers, watches and even lighters. Crystals have amazing abilities such as the ability to [produce electricity](#), [emit energy](#) and [store information](#). **Clear quartz** is one type of crystal which produces piezoelectricity.

“**Piezoelectric Effect**” is the ability of certain materials to generate an **electric** charge in response to applied mechanical stress. The word - **Piezoelectric**, is derived from the Greek words - **piezein**, which means to squeeze or press and **piezo**, which means “push”.

Since this discovery in 1880 by brothers *Pierre and Jacques Curie*, Piezo electric ability has interested many leading scientists. Clear quartz is excellent at transduction and very sensitive to frequencies. A **crystal oscillator** is an [electronic oscillator](#) circuit that uses the mechanical [resonance](#) of a vibrating [crystal](#) of [piezoelectric material](#) to create an electrical signal with a precise [frequency](#). Everything in the universe has an energy field, a frequency and vibration.

More recently, a leading university demonstrated the ability to store information in small amounts of quartz and silicone. The scientists coined the term ‘[Superman Memory Crystal](#)’, when they showed that unprecedented data could be recorded via self-assembled nanostructures created from quartz infused glass. *Silicon has been at the heart of computing since the 1950s, as the most common material used.* In nature, it rarely occurs in its pure form, but rather as silicon dioxide in crystals such as quartz, agate, amethyst and rock crystal.

We work with these two amazing properties, that is, **memory** and **frequency**, to secure and enhance farming operations, businesses and homes with a special set of piezoelectric products. Our products consist of two types of energies. The first is favourable frequencies which support and improve, for instance we enhance water or stimulate plant growth. The second set of frequencies is out-of-phase frequencies, which protects against disease and pests.

**Phase cancellation** is a phenomenon in which two or more “**out of phase**” waves result in weakened or lost frequencies. Similar to noise reduction head phones, we cancel out frequencies. When two identical frequencies are cycling at 180° opposite to each other, complete phase cancellation occurs. We utilize this on biological level to broadcast counter frequencies (*out- of- phase* frequencies) to eliminate pests and disease.

## Our Products

Our **small scale farming, household and business frequency** products are self powered and provide a lifetime of benefits. Our frequency products consist of:

**Water Enhancement:** The benefits of structuring water with magnetic or electromagnetic energy fields are well researched and documented. Irrigating with structured water has shown to reduce water consumption, improving plant growth and yields, while effectively treating hard water and preventing scaling. The ***AquaStruct Water Enhancer*** carries a life time guarantee.

**Algae Control:** The Frequency strip reduces algae in ponds, pools & dams. Piezoelectric frequencies assist with flocculation. The ***ClearPond Strips*** reduces chemical usage in pools. Aquatic life flourishes. Simply strap around a pipe close to the pump, or submerge in stagnant water.

**Fuel Savings:** Our piezoelectric strip for motor vehicles straps around the radiator hose and provides constant energies which optimizes engine performance, noticeable horse power improvement and savings on fuel (between 5 -15%). The ***MotoStruct Performance Enhancer*** protects your radiator, your oil and your engine.

**Garden Protection:** This piezoelectric product emits frequencies 24 hours a day which increases germination, stimulates plant growth and increases flowering. This product also protects against frost damage up to -6 Degrees Celsius. The ***Garden Fairy*** also emits out of phase frequencies which eliminates common insects and disease. This product emits over a 40 meter radius, covering roughly 5000m<sup>2</sup>.

Our counter frequencies are continuously developing and currently eliminate common insects such as crickets, snails, cockroaches, fish moth, aphids, spider mites, whitefly, cutworm, fall army worm, brigade, loopers, ball worm and more. From microscopic examination, we extract and program frequencies which counter the spread of common plant diseases, fungi and mildew. The ***Garden Fairy*** effectively balances the eco system and encourages plant growth.

**Rodent Control:** We care for our predator birds with our poison free, rodent repellent. The ***Rodent Zap*** broadcasts counter frequencies over a 40 meter radius thus protecting homes and business against rats and mice.

### **Custom Profiles**

We work with different stakeholders to developed tailored solutions to meet specific or broad objectives. Our clients pay an annual fee to access all existing information sets and unlimited updated on profiles.

## How do we work with large scale areas?

In 1964, physicist **John Stewart Bell** proved that quantum physics was in fact a complete and workable theory. His results, now called Bell's Theorem, effectively proved that quantum properties like entanglement are as real as the moon and today the bizarre behaviours of quantum systems are being harnessed for use in a variety of real-world applications.

[Quantum entanglement](#) is a theory put forward by **Albert Einstein**. What it means is that *intertwined* particles (for example, two photons) are inextricably related to each other, so that a change in one particle cannot occur without the other particle changing as well, even if the particles are on the opposite ends of the universe. Quantum entanglement is a physical phenomenon that occurs when groups of elementary particles (photons) are produced in proximity, connected in quantum state. Quantum entanglement suggests that acting on connected elementary particles, even if across large distances can instantly influence each other. In quantum physics, entangled particles remain connected so that actions performed on one affect the other, even when separated by great distances.

**Utilising this quantum physics principle “action at a distance” we effectively remedy and treat larger areas such as commercial farming operations.**

## How do the remote packages work?

### Step 1:

**Farmers register and sign up for our services by providing clear maps or accurate GP coordinates of their farm.**

Provide the coordinates through aerial photographs or maps such as Google (Below). For small sites or undercover farming, provide pictures of all the corners of the grow area (Right). *Open Field Tests* should have fixed markers/poles clearly visible, indicating the designated area.

*Love for the Earth and Everything on It*

[www.LighthouseEmporium.co.za](http://www.LighthouseEmporium.co.za)

## Step 2:

*Through continues involvement and proactive inspections, our clients participate in early detection. This allows us to load any new harmful disease, sub species or mutations onto existing customer profiles.*

Farmers registered for our pest and disease service receive upgrades automatically. Our network allows us to expand with our database. When new frequencies arrive at our office we load them onto all existing packages.

## How do we load frequencies?

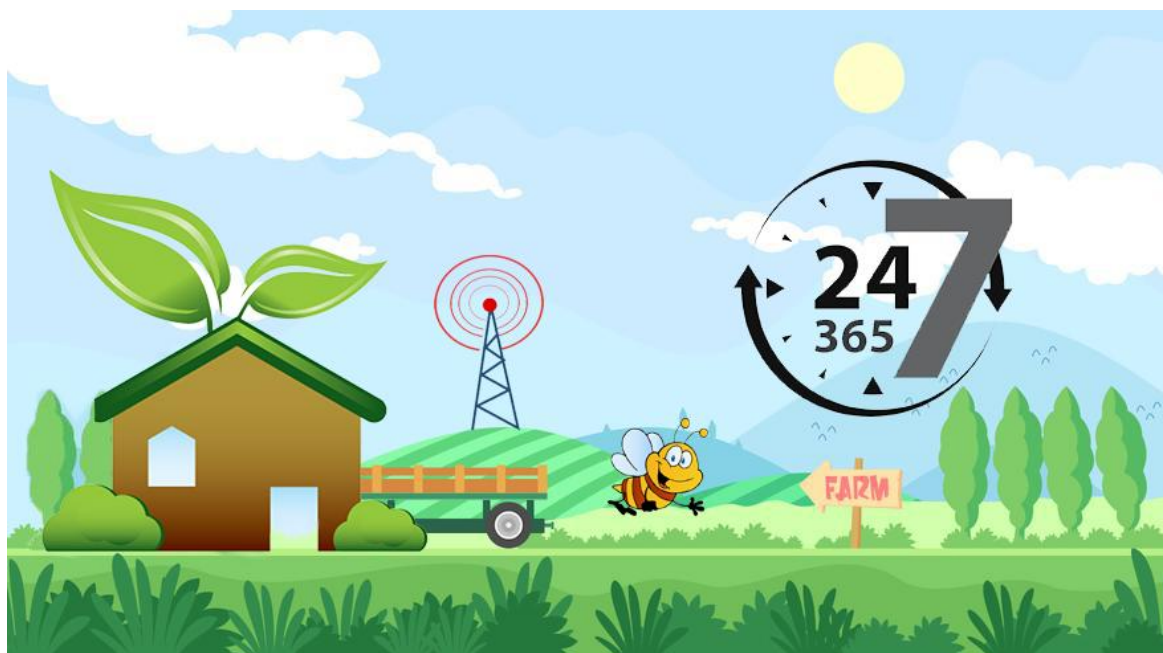

Our customers send us clear photographs in the case of larger insects, small animals and birds. We recommend using a good camera. It is important to have clear images.

In the event of small insects or plant disease, we require samples to be sent to our laboratory in Johannesburg. At our laboratory we extract quality images under microscope and extract counter frequencies by means of DNA.

## Are AgriFrequencies safe?

**Our frequencies are perfectly safe for humans and animals.** We program target-specific frequencies which do not affect bees or predators such as the pray mantis. Only the insects or animals effectively registered and uploaded through our laboratory will be affected.

**Give us a try.** The effectiveness of alternative pest management techniques has the potential to eliminate the need for poisons. Farming with Frequencies demonstrates the ability to protect food sources, improve crop output and reducing pest management costs by up to 90%.
